Data analysis is now part of practically every research project in the life sciences. In this book we use data and computer code to teach the necessary statistical concepts and programming skills to become a data analyst. Instead of showing theory first and then applying it to toy examples, we start with actual applications and describe the theo...

A Note on Priors. Setting priors is an art and a science that goes well beyond anything we can discuss here, and there are lots of resources out there to help you on this (I recommend Hobbs and Hooten 2015, @McElreath2016, and @Gelman2013 as a foundation). You'll notice though that Stan doesn't force you to specify priors, so it can be tempting to say "hey, I like Stan, but priors scare ...

A statistical hypothesis, sometimes called confirmatory data analysis, is a hypothesis that is testable on the basis of observing a process that is modeled via a set of random variables. A statistical hypothesis test is a method of statistical inference. Commonly, two statistical data sets are compared, or a data set obtained by sampling is compared against a synthetic data set from an ...

Spatial analysis or spatial statistics includes any of the formal techniques which study entities using their topological, geometric, or geographic properties. Spatial analysis includes a variety of techniques, many still in their early development, using different analytic approaches and applied in fields as diverse as astronomy, with its studies of the placement of galaxies in the cosmos, to ...

What's this about? Fitting Bayesian regression models can be just as intuitive as performing Bayesian inference—introducing the new bayes prefix in Stata. The bayes prefix combines Bayesian features with Stata's intuitive and elegant specification of regression models. It lets you fit Bayesian regression models more easily and fit more models.

FIGURE 4.1 The evolution from data sources to analysis results passes through several steps. Raw data (captured in databases [DB], flat files, and text documents) must first go through various data preparation methods to prepare them for analysis.
