2004 Audi A4 1.8T (b6). Running Ross-Tech Hex+Can USB adapter and VCDS 11.11.3. Running the set readiness, I get to the part where it is testing o2 and tells me that the engine will be limited RPM's by the ECU. I show "Test OFF" in the status. I press the accelerator and it goes all the way to 6000rpm (near red line). This doesn't seem "limited" to me, right?

Help running "Set Readiness" on Ross-Tech VCDS

Hi i got a issue with code 00285 abs wheel speed sensor rear right wheel. i was stuck in some snow this afternoon and was slipping i punched on the gas pedal and that got me out when i got out i got an ABS and traction control signs all lighten up.

My '05 A6 / C6 had this last Monday. It's the Start Access Authorization Module [fault code is 00288] in the steering column. Although AUDI says it's a non-serviceable part (entire steering column has to be replaced), you can actually take out the module though it is a bit of a pain because the screws are in with LOCTITE.

The primary source of information about books on railway history is George Ottley's monumental bibliography, with its two supplements (no serious public library can claim to be that if Ottley is not available). Jack Simmons' overall evaluative surveys of the literature (both in his own books and in the Oxford Companion - Ottley is mainly non-evaluative) are also useful, but Simmons was less ...
