What is CNG? Compressed Natural Gas (CNG) is natural gas that has been compressed to 3,600 psi, which remains clear, odorless, and non-corrosive.

What is LNG? Liquefied natural gas, or LNG, is natural gas in a liquid form. When natural gas is cooled to minus 259 degrees Fahrenheit (minus 161 degrees Celsius), it becomes a clear, colorless, odorless liquid.

Petroleum engineers design and develop methods for extracting oil and gas from deposits below the Earth's surface. Petroleum engineers also find new ways to extract oil and gas from older wells.

This handbook introduces examiners to and assists them in the examination of income tax returns of taxpayers in the oil and gas industry. Diligent use of these guidelines will shorten the time needed to acquire the examination skills essential to this specialty.

Tailoring the polymer micro-structure or its molecular design and engineering is the most successful method to enhance the membrane morphology towards a desirable separation performance [3,14,31].The most important method to improve PI membrane properties is the change in chemical structure of diamine and dianhydride, the two basic constituents of PIs, by introducing non-coplanar structures ...

The oil and gas industry has been in an economic slump since the mid-1980's. There have not been significant domestic explorations that have been successful.

Reservoir engineering is a branch of petroleum engineering that applies scientific principles to the fluid flow through porous medium during the development and production of oil and gas reservoirs so as to obtain a high economic recovery. The working tools of the reservoir engineer are subsurface geology, applied mathematics, and the basic laws of physics and chemistry governing the behavior ...

SNG production from coal or biomass is considered again due to rising prices for natural gas, the wish for less dependency from natural gas imports and the opportunity of reducing green house

gases by CO₂ capture and sequestration. Coal and solid dry biomass (e.g., wood and straw) have to be converted to SNG by thermo-chemical processes (gasification followed by gas cleaning, conditioning ...

Gas Processing & Treatment Facilitating the recovery, treatment, and monetization of natural gas. Before gas enters a pipeline for transmission to a processing facility, it is necessary to remove the inherent solid, liquid, and gas impurities, which accelerate the corrosion of pipelines and transmission control equipment and lower the heating value of the gas.
