A northbridge or host bridge is one of the two chips in the core logic chipset architecture on a PC motherboard, the other being the southbridge. Unlike the southbridge, northbridge is connected directly to the CPU via the front-side bus (FSB) and is thus responsible for tasks that require the highest performance. The northbridge, also known as Memory Controller Hub, is usually paired with a ...

and wire its SMB Clk, Data and ground to the battery. We then use TI's evaluation software to look at the reported data. It is not known if the chipset inside the battery is indeed the part this program was written for or if it's even a TI chipset in the first place, but luckily SMBus standard defines the base set of registers everybody has to support:
