### **Identifying Unknown Solutions Lab**

Nine Bottles Experiment By: Jenna, Bailey, and Claire Unknown #4 and #6 The data from the first weeks lab showed that these compounds would form a white precipitate, the data from week two's lab agreed The chemical equation supports this because  $\text{AgNO}_3$  and  $\text{NaCl}$  would combine to

### **Nine Bottles Experiment by jenna boyle on Prezi**

The Dreaded Nine-bottle Problem Almost all salts [a salt is an ionic compound] exist in water solutions as separated ions. When solutions of different salts are mixed, the ionic species present may remain in solution as separate entities [i.e., no reaction occurs], may combine to

### **The Dreaded Nine-bottle Problem**

The Nine-Bottle Challenge Name\_\_\_\_\_ Background: Almost all salts ("salt" is a name for an ionic compound) exist in water solutions as separated ions. For example, a solution of sodium chloride contains  $\text{Na}^+$  ions and  $\text{Cl}^-$  ions, and no  $\text{NaCl}$  species. When solutions of different salts are mixed, the ionic species present may

### **The Nine-Bottle Challenge**

, you will be given the same eight solutions. However, they will only be labeled with a letter. You will again combine each unknown solution with every other solution and use your observations to determine the identity of each solution. To conserve chemicals, you will use conduct a "microscale" lab.
