In the previous editions, engineering approaches to soil and water conservation formed the skeleton and its content. In this edition, the text addresses the interactions and impact which soil and water conservation methods and practices have on soil, water and air quality and on the entire environment.

The course deals with the engineering principles involved in soil and water conservation. It includes the classification of the water erosion, and the agronomical and engineering measures adopted for erosion control. The design of bunds and terraces are dealt in detail, followed by gully control measures.

In order to keep the land productive, a good conservation program is imperative. Soil and water conservation is the basis of such a program, and also helps improve land impoverished by erosion and overuse—makes it more productive so that it can support more people. For effective conservation of soil and water, we must treat and use the
